

Schering-Plough

Summer Internship Kenilworth and Summit, NJ

Schering-Plough, a major international pharmaceutical company, is seeking Summer Interns for our R&D facilities in New Jersey.

An opportunity is available in the Drug Safety & Metabolism group, and the candidate will help develop immunohistochemical procedures for the quantification of cell-surface and/or intracellular antigens that will aid in the diagnosis and/or staging of disease. The assays may require the candidate to assist with the development of special embedding and/or antigen retrieval procedures. Such assays will be used in conjunction with computerized image analysis to establish a data base. This position will provide exposure to handling of animal tissues in a GLP environment, histopathologic interpretation and establishing computerized data bases. The successful candidate will work under the direction of a Senior Research Pathologist (veterinarian) and will interact daily with bench scientists, including experienced histotechnologists.

To qualify, the candidate must have completed or be enrolled in a professional veterinary medicine program from an appropriately accredited institution and have a genuine interest in anatomic pathology and its application in a pharmaceutical setting. The paid internship will last 10-12 weeks between May and September. Schering-Plough is an equal opportunity employer with a commitment to workplace diversity.

Apply today! Send your resume and a cover letter to:
